> Summary

Senior machine learning engineer with 8 years of experience taking NLP and LLM systems from research to production. At Thomson Reuters Labs, shipped production GenAI summarization and semantic search, contributed to a commercially launched agentic AI product, and built the model-retraining pipelines and PII-secure data infrastructure behind CLEAR's entity resolution. Turns research code into reliable, reproducible pipelines and works closely with researchers, subject matter experts, and product teams in regulated domains.

> Technical Skills

LLM & Agentic AI: Large Language Models (LLMs), Agentic AI, Multi-Agent Orchestration, PydanticAI, Prompt Engineering, LLM Evaluation (LLM-as-Judge), GPT-4, Claude, OpenAI API

Machine Learning & NLP: Machine Learning, Deep Learning, Model Evaluation, NLP, Transformers (Hugging Face), PyTorch, scikit-learn, XGBoost, Sentence Embeddings, Semantic Search, Information Retrieval, spaCy, NLTK, pandas, NumPy

MLOps, Data & Cloud: MLOps, ML Pipelines, Experiment Tracking (MLflow), Data Pipelines, AWS SageMaker (Studio, Pipelines), Apache Spark (PySpark), Snowflake, AWS (S3, EMR), AWS CloudFormation, Docker, PostgreSQL, Elasticsearch, OpenSearch

Languages & Practices: Python, Java, Scala, Bash, Agile Development

> Experience

Senior Machine Learning Engineer II (Research) at Thomson Reuters

Jul 2021 - Present
Toronto, Canada

Applied ML at TR Labs for CLEAR, Thomson Reuters' due-diligence platform for KYC/AML screening and investigations, and the Checkpoint tax research platform. Built ML systems across the lifecycle in a regulated environment, including LLM features and agentic workflows, model-training pipelines, and secure data infrastructure.

Work Projects

• Entity Resolution Retraining & Snowflake Pipelines: CLEAR

2026 | Internal Tool

Designed and built an on-demand model-retraining pipeline on SageMaker Pipelines, turning researchers' feature-generation, training, and evaluation code into reusable DAG steps. Enabled parallel experiments tracked in MLflow, cutting experiment turnaround by an estimated ~40%. Built proof-of-concept Snowflake processing and training pipelines and assessed the gaps for migrating AWS research workflows to Snowflake.

Tech & Skills: Python, AWS SageMaker Pipelines, MLflow, PySpark, Snowflake, XGBoost, Poetry

• Agentic Investigation System: CLEAR Investigate

2025 - 2026 | Production

Contributed to CLEAR Investigate, Thomson Reuters' commercially launched agentic AI product for investigations. Built a central configuration layer in PydanticAI for agent system prompts, tool definitions, and agent/subagent wiring, so the team could reconfigure investigation agents from one place instead of editing definitions across many files. Migrated the LLM-as-judge evaluation suite into a reusable repository prepared for CI/CD.

Tech & Skills: Python, PydanticAI, Claude, Agentic AI, LLM-as-Judge Evaluation, Prompt Engineering

• CLEAR Business AI: GenAI Report Summarization

2024 | Production

Built the GenAI summary panel for CLEAR Business entity reports, live in production processing hundreds of reports daily. Designed selective XML extraction feeding targeted per-section LLM calls (business overview, key personnel, adverse media, liens and lawsuits), plus a Bing Search + LLM verification step that filters false matches between same-named entities, with each claim linked to its source in the report. Refined prompts and extraction logic through SME annotation rounds against product-manager exemplars.

Tech & Skills: Python, GPT-4, Claude Sonnet, Bing Search API, Prompt Engineering, XML Processing

• Entity Resolution Data Infrastructure: CLEAR KYC/AML

2022 - 2024 | Internal Tool

Built the research data infrastructure for CLEAR's entity resolution system (~800M entities, billions of documents, 700 idents/second). Designed a PII-isolated AWS research environment with SageMaker Studio, CloudFormation, and per-researcher profiles; defined a versioned schema reconciling two incompatible annotation sources, with Spark and Python pipelines to merge records and surface label conflicts; and automated the manual workflow into scheduled, repeatable SageMaker Pipelines.

Tech & Skills: Python, Apache Spark (PySpark), AWS SageMaker, AWS CloudFormation

• Semantic Search Improvement: Checkpoint Tax Research

2021 | Production

Shipped a sentence-embedding query-intent classifier for Checkpoint, Thomson Reuters' tax research platform, separating broad conceptual queries from specific tax lookups to promote higher-level documents. Improved access to conceptual documents by 95% within a ~100ms latency budget. Identified the retrieval gap from SME and customer feedback.

Tech & Skills: Python, Sentence Embeddings, Text Classification, Semantic Search

NLP & Machine Learning Engineer at INAGO Inc.

Jul 2018 - Jun 2021
Toronto, Canada

Built NLP and language-understanding systems end to end, covering data preparation, model training, evaluation, and application integration. Work included transformer fine-tuning and research collaborations with university and industry partners.

Work Projects

• Automated Question Generation from Documents

2020 | Research

Fine-tuned T5 to generate questions from documents, cutting manual data-curation effort by 40%. Experimented with input representations and evaluated generated text with BLEURT in a research collaboration with university partners.

Tech & Skills: Python, PyTorch, Hugging Face Transformers, T5, BLEURT

• Domain-Specific Language Understanding
2019 | Research

Trained domain-specific Word2Vec embeddings and LSTM-based NLU models, with interpretability testing to make model decisions transparent.

Tech & Skills: Python, PyTorch, Word2Vec, LSTM

• Conversational Question Answering
2018 | Research

Built a conversational question-answering system using syntactic and semantic document analysis and automatic ontology generation, in a research collaboration with an industry partner.

Tech & Skills: Python, spaCy

> Education

M.Sc. in Computer Science, York University
2014 - 2018
Toronto, Canada · GPA: 8.17 / 9

Thesis: Interactive Question Answering Using Frame-based Knowledge Representation

B.Sc. in Computer Engineering, Amirkabir University of Technology
2010 - 2014
Tehran, Iran · GPA: 17.18 / 20

> Publications

Question-worthy Sentence Selection for Question Generation
